Important Notice

For Users in Europe

The CE marking is a mandatory European marking for certain product groups to indicate conformity with the essential health and safety requirements set out in European Directives.

By affixing the CE marking, the manufacturer, his authorized representative, or the person placing

the product on the market or putting it into service ensures that the item meets all the essential requirements of all applicable EU directives and that the applicable conformity assessment procedures have been applied.

For Users in the United States

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications.

Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

CAUTION

Use of controls or adjustments or performance of procedures other than those specified herein may result in radiation exposure.

Microsoft® and Windows® are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

VerteLith™ is trademark of MUTOH INDUSTRIES LTD.

Company names and product names that appear in this Guide are registered trademarks or trademarks of the respective companies.

-
- Unauthorized copying or duplication of the whole or part of the contents of this Guide is prohibited.
 - Every care has been taken in writing the contents of this Guide, but please contact MUTOH or the dealer you purchased the product from if you find any unclear, erroneous or otherwise unsatisfactory content in the Guide.
 - Please be aware that MUTOH will not be liable in any way for failures or accidents that result from handling or operating the printer according to any procedures other than those set forth in this Guide.

Safety Symbols

In this document, the following symbols are used for the instructions that must be followed to avoid risk of harm to human health or damage to the property.

Please read and understand the meaning of each symbol and ensure the proper use of the product.

■ The following classifications indicate hazards or damage that could result from ignoring instructions or incorrect handling.

 Warning	Failure to follow the instructions could result in serious injury or death.
 Caution	Failure to follow the instructions could result in minor injury or damage to the whole or part of the product.

■ The following symbols indicate precautions that must be followed.

	An action that must be avoided.
	An important instruction that must be followed.

■ Other symbols

 Important !	Provides information that require special attention or should be followed.
 Note	Provides supplemental or reference information.
	Indicates the link to the reference section.

Note

For the name of each part marked with warning or caution symbols, see “Printer main components / Functions” on page 18 on the XPJ-C641SR-P operation manual.

Safety Precautions

Electrical shock/ short circuit/ fire hazards

Warning

	Do not install this product in a location with high humidity and dust. This could result in an electrical shock or fire.		Make sure to use a designated power socket. Failure to do so could result in an electrical shock or fire.
	Do not use a damaged power cord. This could result in an electrical shock or fire.		Plug the power cord into the wall outlet. Do not use power strips. This could generate heat, resulting in fire..
	Do not connect or disconnect the power plug with wet hands. This could result in an electrical shock.		Plug the power cords into the wall outlet that has the earth connection and make sure to connect the earth. If the earth is not connected, an electrical shock or fire may occur.
	Do not connect an earth wire to the following places: <ul style="list-style-type: none"> • Gas pipe It has potential risks of fire or explosion. • Earth wire of telephone cables or lighting rods Large current may flow when the lightning strikes. • Water pipe or faucet It may not work properly if a plastic pipe is connected to the pipe. 		Make sure to connect an earth wire to the earth connection that meets the following requirements: <ul style="list-style-type: none"> • Earth terminal of power socket. • An earth wire with a copper plate which is buried at 650 mm or more in the ground.
			Keep ink away from fire or heat source and store in a cool, dark place.

Appendix

Safety Precautions

	Do not insert or drop metal or flammable objects into the printer through openings such as vent. This could result in an electrical shock or fire.		Be sure to use the designated power cords. <ul style="list-style-type: none"> Failure to do so could result in an electrical shock or fire. For the designated power cord, please contact your local MUTOH dealer. The power cord should have the protective ground terminal and make sure to plug in securely. Use the power cords which meet the safety standard, voltage and plug shape of the country to use this product.
	Do not block the vent on the product with cloth or other materials. If covered, the inside the product gets hot, resulting in fire.		
	Never open the covers securing with screws. This could result in an electrical shock or damage to the printer.		
	Ensure that no moisture enters the product. This could result in an electrical short circuit.		Make sure to follow the instructions on this guide to connect the power cord or cables. Failure to do so could result in fire.
	If foreign objects or liquid accidentally entered the inside of the printer, do not use it. This could result in an electrical shock or fire. Immediately power off the printer and disconnect the power plug from the outlet. Then contact the MUTOH customer support.		
	Follow the precautions below when handling the power cord. <ul style="list-style-type: none"> Do not modify power cords. Do not place heavy objects on power cords. Do not bend, twist, or pull on power cords. Do not route power cords near heating equipment. 		Follow the precautions below when handling the power plug. <ul style="list-style-type: none"> Do not allow dust or foreign objects to accumulate around the power plug. Firmly insert the power plug into the wall outlet. Incorrect handling could result in fire.

Safety Precautions

Installation

Warning

	<p>Choose the location which satisfies the requirements below:</p> <ul style="list-style-type: none">• The floor must be level.• Avoid vibration from the neighboring devices.• Low humidity and free from dust.• Less chance of temperature and humidity changes.• Avoid direct sunlight.• Avoid water.• Avoid direct air onto the printer.• Low levels of electromagnetic waves.	 <p>Install the product in a location where ventilation can be carried out. Keep the work area well-ventilated. Odor of the ink could have adversely impact on health. If you experience headache, fatigue or dizziness, stop your work and immediately get to fresh air. If nausea persists, seek medical advice.</p>
		 <p>This equipment is not suitable for use in locations where children are likely to be present.</p>
	<p>Before taking out the product from the packaging box, make sure to remove the plastic sheet wrapped around the product first. Failure to do so could cause slip or damage to the product.</p>	

Caution

	<p>At least two people are required for moving this product. When moving, keep the product level.</p>	 <p>Do not tilt the product. The ink inside the product may spill. MUTOH cannot guarantee that the printer can run properly.</p>

Safety Precautions

Handling

Warning

	Do not sit on or place heavy objects on the product. Failure to do so could result in injury from a fall.
	Do not touch the moving parts. This could cause injury or damage to the product.
	In case you need to move the product after ink was filled, move it slowly to avoid impact and risk of ink leakage.

Caution

	Do not attempt the following actions during ink charging: <ul style="list-style-type: none">• Power off the printer.• Disconnect the power cord.• Open the front cover or the maintenance cover.• Put the media fixing handle in unlock position.		Do not touch the cleaning wiper and the print head cap unit with bare hands when cleaning the wiper. If finger oil gets on this, head cleaning cannot be performed properly.
	Do not use the media fixing handle while in printer initialization or printing. The print head can interfere with the pinch rollers and cause damage.		Do not touch the media feed slot, platen and media guide while the heater is in operation. These parts get hot and could cause burn injury.
	Do not use volatile chemicals such as thinner, benzene or alcohol for cleaning. This will damage the paint on the printer.		Do not touch the media guide while printing. The media guide becomes hot and you could get burn injuries.

occur

Appendix

Safety Precautions

	Do not push the tab on the cutter holder too hard or release suddenly. There is a spring under the cutter so that the cutter may jump out from the holder.		Do not touch the blade edge. This will cause injury.
	Before moving this printer, always empty the waste ink tank even moving short distance. Failure to do so may result in damage to the product.		Immediately after printing, the media guide gets hot. Allow it to cool down enough to do the work.

Safety Precautions

Ink and waste fluid

 **Warning**

	Make sure to read the Safety Data Sheet (SDS) before using ink cartridges for the first time.
	Store ink cartridges and waste fluids in a cool, dark place and avoid direct sunlight. Keep away from <ul style="list-style-type: none"> • children's reach • fire and heat
	When disposing of ink, waste fluid collected from the printer, or containers and paper towels with ink adhered, be sure to follow the instructions of industrial waste disposal contractors, related laws, and local regulations to dispose of them.

 **Caution**

	Follow these precautions when handling ink cartridge: <ul style="list-style-type: none"> • Do not disassemble • Do not drop or hit This could lead to ink leakage.		Use MUTOH genuine ink. This printer is designed to deliver best performance by using MUTOH genuine ink. The use of non-genuine ink may affect the printer as well as print quality. This is not covered by the warranty.
	Use inks within its shelf life. <ul style="list-style-type: none"> • Using an expired ink could result in damage to the printer. • When expired, replace with a new one even if ink remains in the ink bag. • Dispose of expired ink as industrial waste. Put the emptied ink cartridge in a plastic bag and dispose of it according to the local regulations. 		
	When handling ink, wear protective gloves, glasses and masks. When handling ink cartridges, avoid skin or eye contact with ink. If in eyes or on skin, immediately flush with running water. If left untreated, it could cause bloodshot eyes or mild inflammation. If there is any abnormality, seek medical advice immediately.

Precautions

What you can do on this machine

This machine can output the following four methods.

Print only	Print a design.  "Printing workflow" P.44
Print and Cut separately	This is used when you will remove the media after printing, laminate it or do other treatment and load it again for cutting. The crop mark is used for registration when reloading the media. You will need output data for printing and cutting.  "Print and cut separately" P.133 <div> Important ! Secure enough margin at the top and bottom of media.</div>
Print and Cut (Continuously)	Print a design and then cut it out. You will need output data for printing and cutting.  "Print & Cut" P.142 <div> Important ! Cutting must be performed after the print is completely dry.</div>
Cut only	This is used for cutting out stickers. You will need output data for cutting.  "Cut only" P.144

Precautions

Printing area

The machine always starts printing from the Origin position (print start point). The illustration below is an example of output result.

a=5mm *1 *2

b=15mm~25mm *3

c=5mm

d=15mm~25mm *3*4

*1 Machine leaves 15 mm margin on top after media initialization, manual backward media feeding or anti-sticking treatment.

*2 Machine leaves 40 mm margin on top when Media Initial is set to Top or after auto cutting.

*3 Margin can be changed from the remote panel.

*4 More than 15 mm is required as the edge of media is held down by pressure roller

Supported media

Media that meet the requirements below can be used on this product.

Media Size

Width^{*1}

- 198 ~ 228 mm
- 283 ~ 313 mm
- 344 ~ 374 mm
- 394 ~ 424 mm
- 444 ~ 474 mm
- 494 ~ 524 mm
- 602 ~ 630^{*2} mm

^{*1} Common to cut sheet and roll media.

^{*2} Maximum width (For a roll media, width of paper core or media whichever is greater).

Maximum thickness	For printing only	Head height "Low":	0.4 mm (Maximum thickness that media can pass through the media path: 0.8 mm)
	For cutting		0.4 mm (including media ^{*3} and backing material) ^{*3} Thickness of film 0.22 mm
Roll media outer diameter			150 mm
Paper core diameter			2 inches or 3 inches
Weight			up to 9 kg

Important!

The default head height is set to "Low".

In the "Low" setting, media up to 0.4 mm thick can be loaded on the printer.

Note

For recommended media, please contact your local MUTOH dealer.

Precautions

Media handling cautions

Note the following points when handling the media.

- Use the media under an appropriate environment. The appropriate temperature and humidity for printing are as follows.

Recommended Printing Environment	Temperature: 22° C to 30° C Humidity: 40% to 60%, No condensation
Rate of change	Temperature: within 2° C per hour Humidity: within 5% per hour

- Do not use folded, scratched, torn, and rolled media.
- The size of media can change according to changes in humidity in the printing environment. Before using media, rest it in the printing environment for 1 hour to adapt it to the environment. Printing without adapting media to the printing environment may cause media jams due to gaps or wrinkles in the media. Print quality is also affected.
- When using this machine in a low-humidity environment, the cut media may get stuck and may not come down. In such a case, open the front cover after the media is cut and remove it.
- Do not touch the print side. Moisture and oil on your hands may affect the print quality.
- Do not leave media loaded in the printer for a long time. Some media has winding curls, causing media jams and degradation of print quality. Avoid using such media especially in winter or in dry conditions.
- Do not discard the original packaging box and plastic bag of roll media. You will use them for storing media.

Precaution on storing media after use

When storing roll media after use, follow these precautions to avoid print defects caused by cockling.

- After removing your roll media from the scroller, wind it back onto the roll properly and put it in the original plastic bag. Then store it in the package it came in.
- Avoid high temperature, high humidity, and direct sunlight when storing media.
- Keep the media dry.

Precautions

Precautions

Please use this printer regularly

Mutoh recommends to use this printer at least once a week.

If the printer is not used for a long time, the print head could get clogged, causing damage to the printer.

Please handle ink cartridge carefully

- Before using the ink cartridge for the first time, be sure to read the Safety Data Sheet (SDS) before carrying out any work.
- Do not disassemble the ink cartridge.
If disassembled, the ink may get into the eyes or on the skin, causing irritation or allergic reactions.
- When handling ink cartridges, be careful not to get ink in your eyes or on your skin.
If in eyes or on skin, immediately flush with water. If left untreated, it could result in bloodshot eyes or mild inflammation. If abnormality persists, seek medical advice immediately.
- Do not drop the ink cartridge or hit it hard. Ink may leak.
- Ink should be used up within the expiration date.
Expired ink should be disposed of as industrial waste, and empty ink cartridges should be put in plastic bags and disposed of in accordance with local ordinances and municipal regulations.
- Use MUTOH genuine ink.
This product is designed to get the best performance of the product by using MUTOH genuine inks. Use of non-genuine ink may adversely affect the product itself and print quality.

Precautions

Please conduct maintenance regularly

This product requires regular user maintenance.

- Run a nozzle check before printing. If the nozzles are clogged, run a head cleaning.
- Clean the cleaning wiper once a week.
- Clean the inside the machine once a month.

Some parts need to be replaced periodically

In this product, the following parts must be replaced after a long-term use.

- User replaceable parts:
Flushing box pad, Blade for sheet cutter, Blade for contour cutter, Blade holder, Cutting mat, Cleaning wiper, Plug for high-capacity ink pack adapter
- Parts required to be replaced by service personnel:
Motors, Pumps, Print heads

Sleep Mode

While in sleep mode, the machine performs following automatically:

- power saving
- scheduled automatic head cleaning

Important!

If you are going to put the machine in sleep mode for more than 7 days, perform followings once a week:

- Check the ink level in the ink cartridges. When the message [Ink Low] appears on the control panel, replace with new ones.
- Run a nozzle check. If nozzle clogs, perform head cleaning.

To start and end sleep mode

1. Putting the machine into sleep mode

1 Check that

- the front cover is closed.
- ink cartridges have sufficient ink.
- the waste ink tank has enough space.
- the media fixing handle is unlocked.

Important!!

If you are going to leave the printer in sleep mode for a long period of time, empty the waste ink tank.

2 Start MSM and open the remote panel.

Loading media into the machine

Follow these steps.

Loading a roll media into the printer

1. Loading a roll media onto the spindle

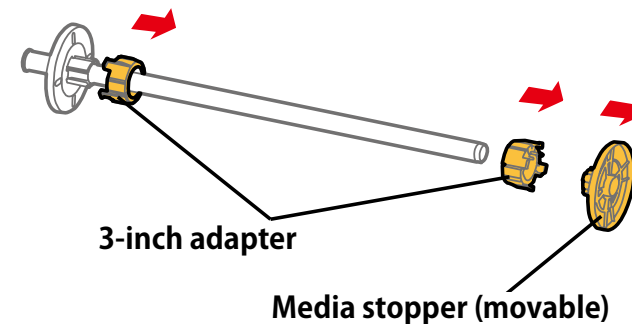

Items Required:

- Roll media: x1
- Scroller: x1

- 1 Remove the 3-inch adapters and the media stopper (movable) from the scroller.

Note

If you are using a roll media with 3-inch paper core, leave the 3-inch adapters attached.

4

Move the pinch roller arms to the both end of media.

- Make sure to check that the pinch roller arms are raised (in UP position).
- Hold the base of the arm and slowly move it. If the movement is heavy, move the arm while holding the printer.

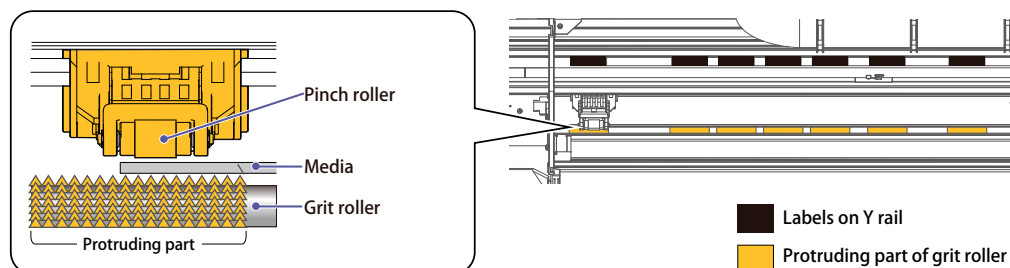

Important!

Check that the pinch rollers and media are positioned as shown in the illustration.

- The pinch roller and media are on the protruding part of the grit roller.

(The black labels on the Y rail indicate the position of protruding part of the grit roller. Please use this as a guide when checking.)

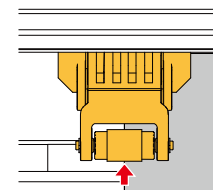

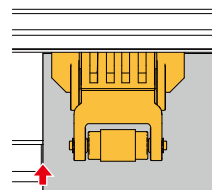

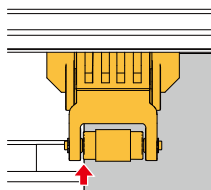

- The edge of media and the edge of pinch roller are aligned.

Nozzle check and cleaning

Run a nozzle check

Before you start daily operation, run a nozzle check. If nozzles are clogged, perform cleaning.

This machine offers the following nozzle check menus:

- Nozzle Check: Prints a nozzle check pattern using the settings specified in the Nozzle Area Select option in the Advanced Setting tab.

☞ ["Nozzle check steps" P.59](#)

- Nozzle Check F: Prints a nozzle check pattern using all nozzles.

☞ ["Nozzle check F steps" P.57](#)

Nozzle check F steps

- 1 Load media to print a nozzle check pattern.

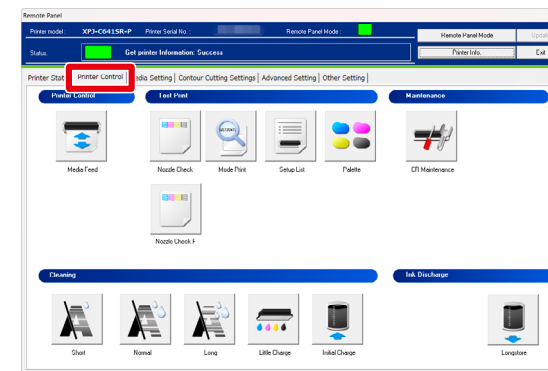

☞ ["Loading media into the machine" P.51](#)

- 2 Start MSM and open the remote panel.

☞ ["Launching/ Opening/Exiting MSM" P.26](#)

- 3 Click the Printer Control tab.

- The Printer Control tab page opens.

5 Check the nozzle check print.

- If you find missing or thin lines on the print, go to **"Head cleaning" P.61**.
- If all lines are clearly printed, you can start printing.

Note

- The above illustration is an example of pattern with Nozzle Area Select set to "Nozzle ALL".
- Use MSM to set the Nozzle Area Select option.
- Printer information (date and time printed, serial number, firmware version, Nozzle Area Select setting) is printed next to the pattern.

Important!

If you run a nozzle check print immediately after initial ink charging is complete, the following symptom may appear.

- Lines are blurred
- Image is partially not printed

In such cases, perform the "Little Charge" cleaning from [Printer Control] - [Cleaning] in MSM. Then print and check the result. If there is no improvement, leave the printer for at least one hour and then perform a head cleaning or "Little Charge" cleaning. Once finished, print an image again.

If the problem still persists, please contact your local MUTOH dealer.

Calibrating your printer

The print quality calibration must be performed before you print for the first time.

Print quality calibration ("Adjust Print")

Make sure to run this calibration when

- you use this product for the first time
- you change to the different types of media

Calibration is not required in cases other than those listed above. Move to ["Nozzle check and cleaning" P.57](#).

This calibration adjusts dot placement position in bidirectional printing. "Adjust Print" has following menus:

Auto	The color sensor reads the adjustment pattern print and the printer runs automatic calibration.
Custom	Print an adjustment pattern and enter the number of the pattern that looks most aligned. This menu calibrates the dot placement position for all print modes. Print quality can be optimized even if the print mode selected in the RIP software and the printer are different.

Note

To print an adjustment pattern, more than 550 mm of printable area is required. If less than 550 mm, calibration cannot be performed.

● Adjustment pattern for each print mode

print mode	pattern
Super Quality	Pattern F
High Quality

2 Find and mark the number written under the pattern that has the least misalignment in each pattern like you did in [3. Rough Adjustment].

- Do this for patterns A to F.

3 In [4-2 Adjustment value], enter the number you marked for patterns A to F and then click [Set].

- The print quality calibration is now completed.

Media Feed Adjustment

This adjustment corrects the media feed amount.

Make sure to run this adjustment when

- you use this product for the first time
- you changed to the different types of media

When the following symptom appears on your prints, you should run this adjustment:

- Images are overlapping.
- White lines appear in an image.

Other than above case, there is no need to perform this adjustment. Move to ["Nozzle check and cleaning" P.57](#).
You will need a ruler for this adjustment.

Media feed adjustment steps

Note

To print an adjustment pattern, more than 400 mm of printable area is required. If less than 400 mm, calibration cannot be performed.

1 Load a roll media.
 ["Loading media into the machine" P.51](#)

2 Start MSM and open the remote panel.

Run a media feed adjustment manually by checking print results

1. Initial Print

- 1 Start MSM and open the remote panel.
👉 "Launching/ Opening/Exiting MSM" P.26

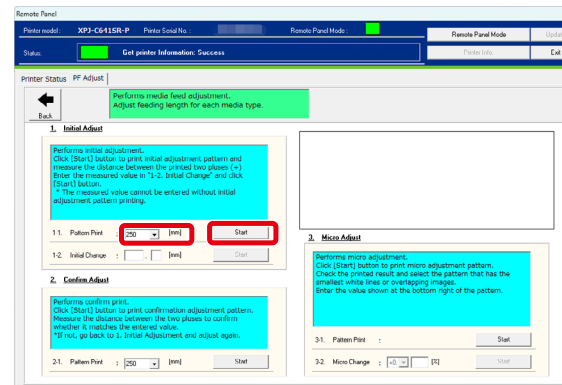

- 2 Go to the Media Setting tab > Adjust > PF Adjust and click [Start].

- The PF Adjust page opens.

- 3 Go to [1. Initial Adjust] > [1-1 Pattern Print], enter the media feed length (mm) and click [Start].

- Enter the length that your ruler can measure. Increasing feed length will improve accuracy of media feed adjustment.
- The machine prints a pattern.

High-Capacity ink pack adapter

For how to attach a 1000ml ink bag to the high-capacity ink pack adapter, see the high-capacity ink pack adapter operation manual.

When using the high-capacity ink pack adapter for the first time

In the following cases, air in the high-capacity ink pack adapter may enter the ink lines in the machine, causing nozzle clogging.

- When you install the high-capacity ink pack adapter on the machine already filled with ink.
- When the high-capacity ink pack adapter was already used on the machine and you replace with a new high-capacity ink pack adapter to install.

To avoid this, make sure to perform an initial ink charging from the remote panel on MSM.

For initial ink charging procedure, see the following section.

👉 ["Performing initial ink charging" P.203](#)

Replace the adapter's plug

The plug of the high-capacity ink pack adapter needs to be replaced when the high-capacity ink pack adapter has been removed/installed for a certain number of times.

For the detailed procedure, see the following section.

👉 ["Replacing the adapter's plug for high-capacity ink pack adapter" P.187](#)

Advanced settings

Adjust head height

About head height

Normally set the head height to "Low". Avoid using the machine with High setting unless a head strike occurs with Low setting. The closer the gap between the media and the printhead, the better the consistency of the print quality.

Important!!

Depending on the condition of a roll media or media cockling caused by the printer settings, you may get a head strike causing ink smears on the media. In such cases, try followings:

- Reduce the heater temperature setting
 - ➡ ["Specify the heater setting" P.101](#)
- After you change the head height, make sure to perform the print quality calibration.
 - ➡ ["Print quality calibration \("Adjust Print"\)" P.63](#)
- Do not open the front cover and change the head height during printing. Print quality cannot be guaranteed.

See the following table for the relationship between the head height and the recommended media thickness. Avoid using higher head height unless absolutely necessary, as the wider head gap will cause ink mist to adhere to the printhead nozzles, media or inside of the printer, adversely affecting print quality or leading to damage to the printer parts.

Head height	Recommended media thickness	Maximum media thickness that printer can feed	Description
Low	~ 0.3 mm	0.4 mm	Normally use this head height.

(Maximum thickness that media can pass through the media path : 0.8 mm)

High-Capacity ink pack adapter

Adjust head height

Advanced settings

Roll Length Manage menu

This menu allows you to check and change the remaining length information of roll media being loaded in the printer.

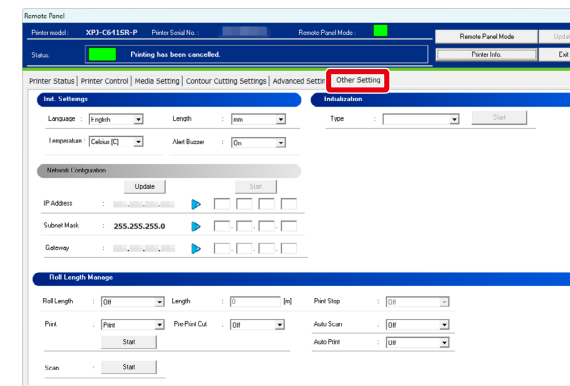

Note

- This menu will not be displayed when the "Media Initial" menu is set to [Off] on MSM.
- This menu will not be displayed when no roll media is loaded in the printer.
- "Print" or "Simple Print" requires at least 400 mm printable width. Before printing, make sure that there is sufficient width on the media.
- If printable width is less than 400 mm, the printer will not perform printing. Printable width on the media can be adjusted by changing CR origin and side margin (left and right side margin) settings.

Procedures

- 1 Start MSM and open the remote panel.
 ["Displaying remote panel" P.27](#)

- 2 Click the Other Setting tab.

3

In the Roll Length Manage menu, specify the following settings. Up to 3 roll media can be managed.

- [Roll Length]: Select a roll media.
 - Options: Off / Roll1 / Roll2 / Roll3
 - *The underlined option is the default setting.
- [Length]: Enter the length of roll media (m) being loaded.
 - Setting range: 1 m to 30 m to 200 m
 - *The underlined option is the default setting.
- [Print Stop]: Select whether or not to pause printing when the remaining length of loaded roll media reaches 0 (m).
 - Options: Off / On
 - *The underlined option is the default setting.

Note

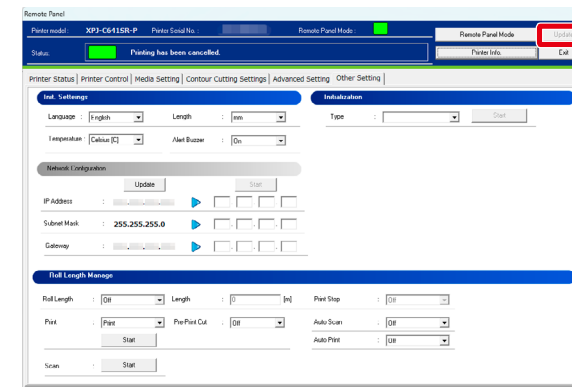

- When you replace a roll media, set the Roll Length menu again. Remaining roll length may not be displayed correctly if it is not set.
- The [Print Stop] menu is enabled only when the [Roll Length] menu is set to other than Off.

4

Click [Update].

- This will save the change in the machine.

Install a blade on the blade holder

Name of each part on blade holder

Note

The blade is installed on the blade holder when the machine is shipped from the factory.

Caution

Press the pin so that the blade comes out. When pressing, keep your finger away from the tip of holder.

Installing a blade

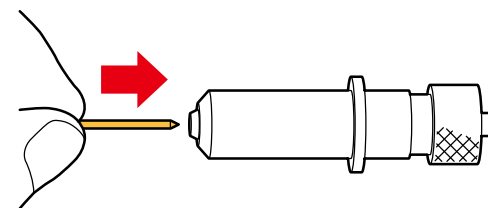

1

Insert the blade into the blade holder.

- When more than two-third of the blade is inserted, it will be attached by magnetic force.

Important!

Using a soft object such as paper, lightly push the tip of the blade holder and check that the blade is in place properly.

Optimize cut quality

Adjust blade depth

Target blade depth

One revolution of adjustment knob : 0.5mm

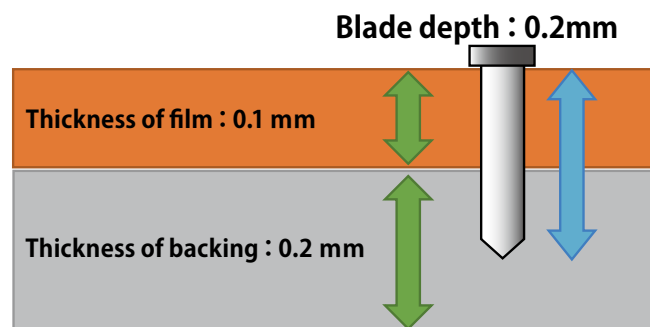

Blade depth = 「Thickness of film」 + 「Thickness of backing material / 2」

Example of blade depth

When the media thickness is 0.3mm

(Thickness of film: 0.1 mm, Thickness of backing material: 0.2mm) :

Blade depth = $0.1\text{mm} + (0.2\text{mm}/2) = 0.2\text{mm}$

Use the above as a guide when making an adjustment.

Before Use

Basic
Operations

Cutting
Workflow

Maintenance

When problems
occur

Appendix

Cut Preparation

Print and cut separately

Print & Cut

Cut only

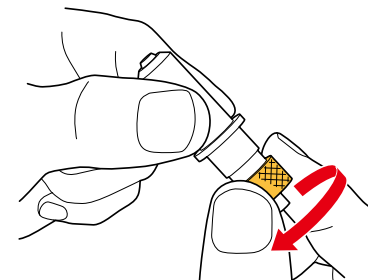

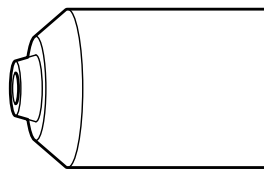

Optimize cut quality

Adjustment steps

- 1 Turn the adjustment knob counterclockwise so that the tip of blade and the tip of blade holder are at the same position.

Important!

Check that the tip of the blade is not sticking out.

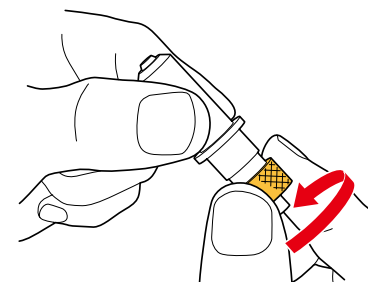

- 2 Calculate the blade depth using the calculation formula of target blade depth (thickness of film + thickness of backing material)

👉 "Target blade depth" P.113

- 3 Turn the adjustment knob clockwise to stick out the blade and adjust the blade depth.

Important!

- One revolution of adjustment knob will stick out (or store) the blade 0.5 mm.
- Once adjusted, make sure not to turn the adjustment knob. This will change the blade depth.

Cut Preparation

Print and cut separately

Print & Cut

Cut only

Optimize cut quality

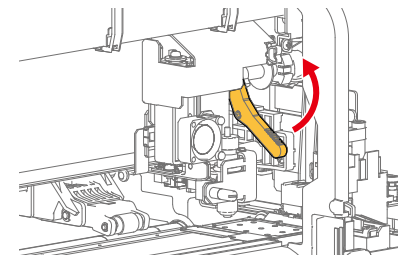

Install the blade holder into the machine

- 1 Open the front cover.

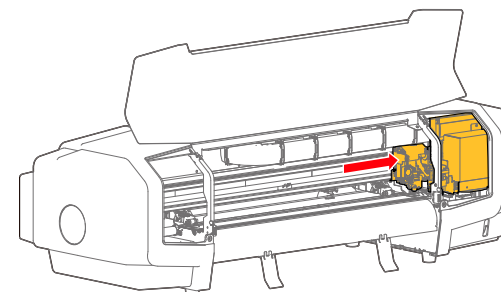

- 2 Raise the head adjustment lever to change the print head height to "High".

Important!

Make sure to set it to "High". The print head may contact the pinch roller arm and get damaged.

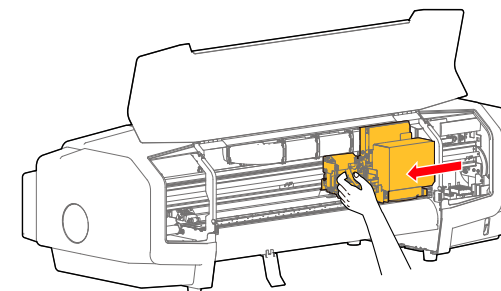

- 3 Push the carriage to unlock it.

- 4 Manually move the carriage to the platen where you can easily install the blade holder.

Important!

Hold the print head adjustment lever to move it.

5 Attach the blade holder.

1. Loosen the thumbscrew.
2. Open the holder fixing plate.

Important!

Do not remove the thumbscrew from the holder fixing plate..

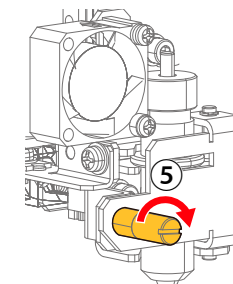

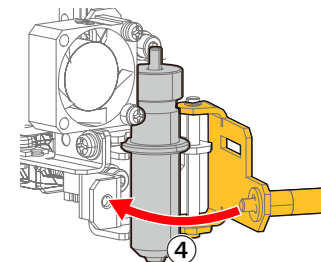

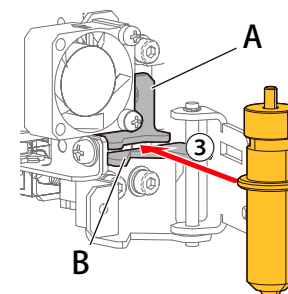

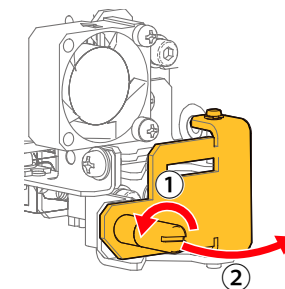

3. Fit the outer ring of the blade holder in the gap between A and B.

4. Close the holder fixing plate.

5. Tighten the thumbscrew.

Important!

Insert the thumbscrew straight into the screw hole and tighten. If it is slanted, the screw may not be tightened properly, causing damage to the cutter and other part.

 "Cutting conditions" P.149

- ① Cut Contour: Setting items for contour cutting
- ② Cut Through: Setting items for through cutting

The screenshot shows the 'Tool Settings' dialog box with two sections highlighted by red boxes and numbered 1 and 2. Section 1, 'Cut Contour', includes settings for Cut Force (80 gf), Cut Acceleration (0.05 G), Cut Speed (150 mm/s), Blade Offset (0.15 mm), and Cut Count (1). Section 2, 'Cut Through', includes settings for Cut Force (200 gf), Cut Acceleration (0.05 G), Cut Speed (150 mm/s), Blade Offset (0.15 mm), Cut Count (1), Cutting length (10 mm), and Spacing (0.1 mm). Both sections have checkboxes for each of the first four items, all of which are checked. The 'Save' and 'Cancel' buttons are at the bottom right.

Section	Item	Value	Unit
① Cut Contour	Cut Force	80	gf
	Cut Acceleration	0.05	G
	Cut Speed	150	mm/s
	Blade Offset	0.15	mm
	Cut Count	1	
② Cut Through	Cut Force	200	gf
	Cut Acceleration	0.05	G
	Cut Speed	150	mm/s
	Blade Offset	0.15	mm
	Cut Count	1	
	Cutting length	10	mm
	Spacing	0.1	mm

The values shown in this image are the default values.

Cut only

Optimize cut quality

● Cutting conditions

Setting items	Setting range	Contents
Cut Force [gf]	30-300	The pressure that the blade comes down onto media. <ul style="list-style-type: none">• Contour cut: Too much pressure will leave the blade holder marks on the media or cut through the backing material.• Through cut: Too much pressure will shorten the life of the blade.
Cut Acceleration [G]	0.05-0.50	Cutter acceleration. If it is too large, the cut line is misaligned or gets crooked. The smaller the acceleration, the higher the accuracy.
Cut Speed [mm/s]	20-150	Moving speed of the cutter for cutting. If it is too high, the cut line is misaligned or gets crooked. The slower speed will improve accuracy.
Blade Offset [mm]	0-0.5	The distance between the center of the blade holder and the tip of blade. The following problems can be seen if this option is not set properly. <ul style="list-style-type: none">- Peeling on corners -> improper value- Corners with flags -> too large- Rounded corner -> too small
Cut Count	1-9	The number of times the blade cuts the same location. It may be effective to increase the number of cuts depending on the thickness or hardness of media.
Cutting length [mm]	0.1-100.0	(Through-cut only) Length of the area to be cut through.
Spacing [mm]	0.1-10.0	(Through cut only) Length of uncut area.

Important !

- The faster the "cut speed" and "cut acceleration", the worse the cutting quality. Adjust these settings according to the required cut quality level.
- Even if cutting condition is adjusted, using improper media could shorten the life of cutter or result in damage to the cutter.

Optimize cut quality

Cut quality of curves

Cutting conditions for curved line can be selected from the following three modes. Select an appropriate one according to the sharpness and amount of curved lines contained in the cut data or required quality level.

Quality	Select this for cut data with many sharp curves and when you want to prioritize curve cutting quality over the speed.
Production	Select this for cut data with many gentle curves and when you want to balance between cutting quality and speed.
High Speed	Select this for cut data consisting of mostly straight lines or when you prioritize the speed over cutting quality.

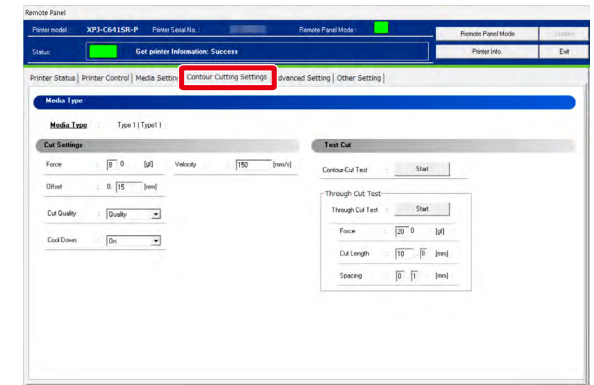

Note

There may be no difference in overall cutting speed depending on the sharpness or amount of curves included in cut data.

Procedure

- 1 Start MSM and open the remote panel.

Cut scale adjustment

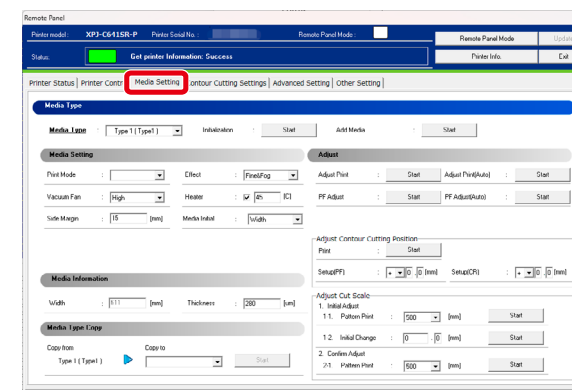

Calibrate the cutting distance in the carriage moving direction. This calibration should be performed when the following symptom appears:

- The cut position and print position do not match on the non-origin side.

Procedure

1. Initial Adjustment

- 1 Load media into the machine.
👉 "Loading media into the machine" P.51
- 2 Start MSM and open the remote panel.
👉 "Displaying remote panel" P.27
- 3 Click the Media Setting tab.

Cut only

Optimize cut quality

4

From [Adjust Cut Scale] > [1. Initial Adjust] > [1-1. Pattern Print], enter the width (mm) of the pattern to be printed and click [Start].

- The pattern printing and cutting with the specified width begins.

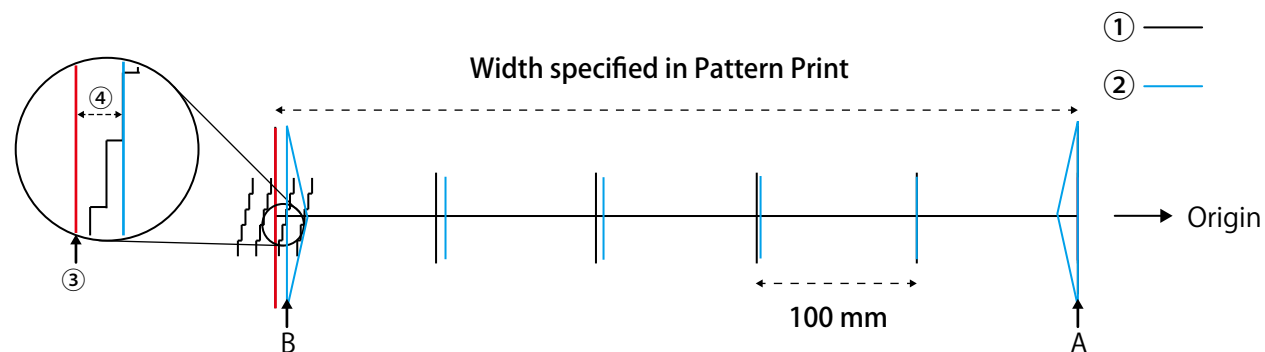

5

Using the stepped scale lines printed on the left side of the pattern, measure the distance (④) between the reference line (③) and the cut line (B).
(Width of stepped scale line: One step = 0.1 mm)

- Print line: ①
- Cut line: ②

(In this illustration, the reference line is shown in red, but it will be printed in black.)

Important!

If the printed line and cut line do not align on the origin side (A), go to "Adjust the contour cutting position" P.126 to adjust contour cutting position.

Before Use

Basic
Operations

Cutting
Workflow

Maintenance

When problems
occur

Appendix

Print & Cut

Cut only

Optimize cut quality

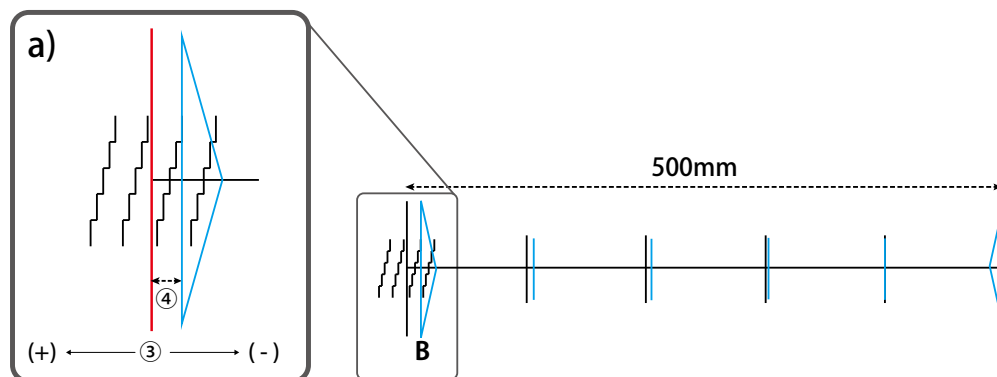

6

The Initial Change value is calculated as [width (mm) of pattern] + [distance between the reference line and cut line (④ = the number of vertical lines in the scale lines x 0.1 mm)].

Example a) If the width of the pattern is set to 500 mm and the cut line was off from the reference line by five vertical lines of the scale lines to the origin side:

$$\textcircled{4} = 5 \times 0.1 \text{ mm} = -0.5 \text{ mm}$$

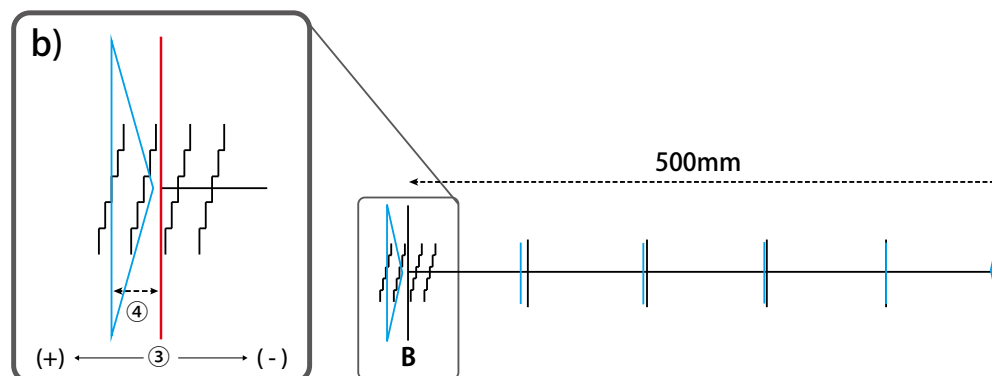

$$\text{Initial Change value} = 500 \text{ mm} - 0.5 \text{ mm} = 499.5 \text{ mm}$$

Example b) If the width of the pattern is set to 500 mm and the cut line was off from the reference line by eight vertical lines of the scale lines to the non-origin side:

$$\textcircled{4} = 8 \times 0.1 \text{ mm} = 0.8 \text{ mm}$$

$$\text{Initial Change value} = 500 \text{ mm} + 0.8 \text{ mm} = 500.8 \text{ mm}$$

Replacing with a new ink cartridge

When an ink cartridge runs out of ink, the error LED blinks with beep sound and printing pauses. Replacing with the new cartridge will resume printing.

Warning.

Keep ink cartridge away from fire or heat source to avoid risk of fire.

Important!

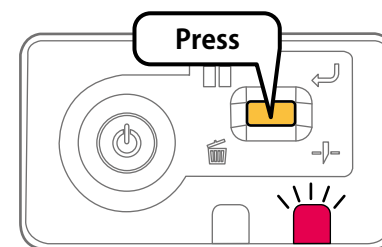

- Do not replace ink cartridge when the printer is powered off. Ink level cannot be detected correctly.
- When moving an ink cartridge from cold place to warm place, rest it in room temperature at least 3 hours before use.

Procedure

1

Short press the operation key on the control panel.

- The beep stops.

2

Start MSM and open the remote panel.

Emptying waste ink tank

When the certain amount of ink is used on the machine, the error LED on the control panel turns on with beep sound. Drain the waste ink into a container like PET bottle to empty the tank.

Caution

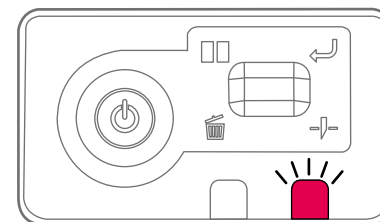

Be careful not to get ink in your eyes or on skin. Wear protective gloves.
If in eyes or on skin, immediately flush with water.
If left untreated, it could result in bloodshot eyes or mild inflammation.
If abnormality persists, seek medical advice immediately.

Important!

When moving this product, empty the waste ink tank even if it is short distance.
If ink splashes inside the waste ink tank while being moved, it will cause damage to the product.

Steps

- 1 Check that the error LED is ON.

- 2 Start MSM and open the remote panel.

Head cleaning

If there are missing lines in the nozzle check print, perform a head cleaning.
It consumes some ink.

The following cleaning modes are available in this product. Select an appropriate mode depending on the result of nozzle check print.

Short cleaning	Consumes less ink than "Normal" cleaning.
Normal cleaning	Select this mode if there are several missing lines in the nozzle check print.
Long cleaning	Consumes more ink than "Normal" cleaning. Perform "Long" cleaning if nozzle clogging persists even after "Normal" cleaning was performed.
Little Charge	Gives higher cleaning, but consumes large amount of ink.

Important!

When performing a "Little Charge", please comply with the following.
If cleaning is interrupted, it may consume more ink.

- Do not turn off the machine.
- Do not disconnect the power cord.
- Do not open the front cover.
- Do not raise pinch rollers (Do not unlock the media fixing handle).
- Do not remove ink cartridges.
- Do not use an ink cartridge with less ink.

Cleaning the cleaning wiper

When to clean :

- Once a week
- lines are blurred or image is partially not printed even after head cleaning was performed

What you need:

- Cleaning stick

Cleaning steps

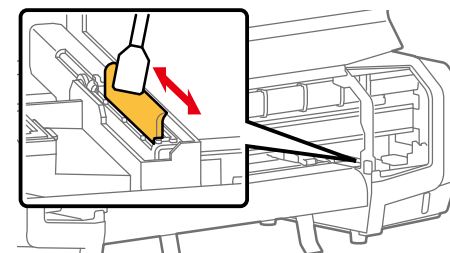

- 1 Put the machine in the CR maintenance mode.
 "Put the machine in the CR maintenance mode" P.171
- 2 Open the front cover.

Important!

Make sure to follow the instructions below:

- Use a dry cleaning stick. Using a wet cleaning stick could cause damage to the print head.
- Do not reuse cleaning sticks. This will cause dust to adhere the wiper, leading to malfunction.
- The standard maintenance time is within 5 minutes. If it takes longer, the print head will get dried, causing the damage.

- 3 Use the cleaning stick to wipe off the cleaning wiper.
 - Wipe off the left side of the wiper back and forth.

Cleaning of color sensor

When to clean:

- Repeatedly failed to perform automatic print quality calibration
- Repeatedly failed to read crop marks

What you need:

- cleaning stick
- ethanol (more than 50% ethanol)

Important !!

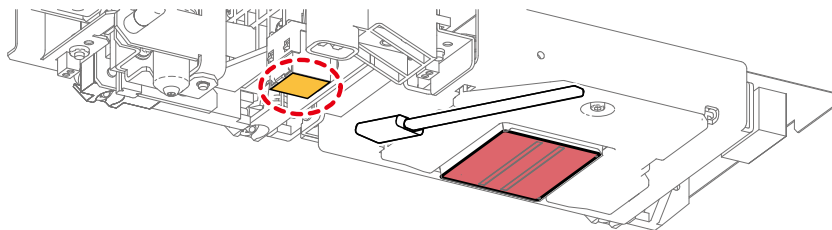

Follow the instruction below during cleaning:

- Do not push hard on the color sensor glass with cleaning stick. This will cause damage to the glass.
- Do not reuse the cleaning stick. This will cause dust to adhere to the sensor, leading to malfunction.
- The standard maintenance time is about five minutes. If it takes longer, the print head will get dried, causing the damage.

1 Put the machine in the CR maintenance mode.
☞ "Put the machine in the CR maintenance mode" P.171

2 Open the front cover.

3 Using the cleaning stick dampened with small amount of ethanol, gently clean the bottom of the carriage to wipe off ink or dust.

Replacing the flushing box pad

The flushing box is a part that collects inks spitted from the print head. Please replace the flushing box pad periodically. If used without replacing, it can cause damage to the print head.

When to replace:

- When looking from the side, the ink deposits on the flushing pad is visible through the flushing box frame. (Approximately every two months) *

*It depends on your use frequency. Check it periodically.

What you need:

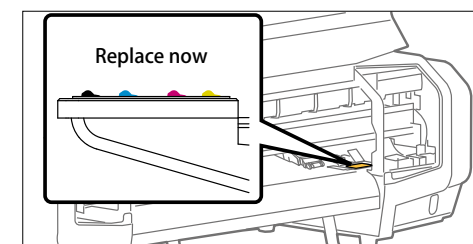

- Flushing box pad
- Waste paper (paper that ink does not bleed through)
- Polyethylene gloves (commercially available)

Checking steps

1 Open the front cover.

2 Check the pad of the flushing box.

- (When looking from the side) if the ink deposits on the flushing pad is visible through the flushing box frame, you need to replace it.

3 Close the front cover.

Replacing steps

1 Put the machine in the CR maintenance mode.

Replacing the adapter's plug for high-capacity ink pack adapter

You will need to replace the plug of the high-capacity ink pack adapter after the adapter has been removed and loaded for the certain number of times.

Note

For proper instructions of high-capacity ink pack adapter, see the high-capacity ink pack adapter's operation manual.

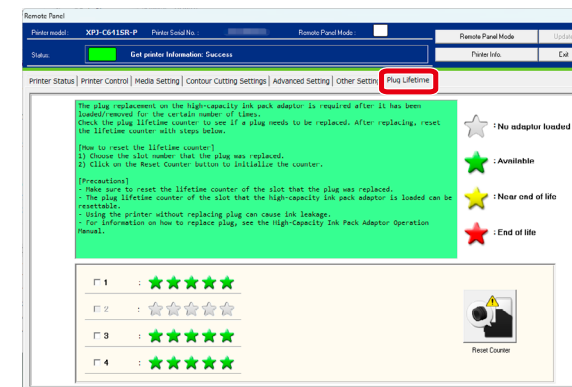

1. Checking the life of adapter's plug

The plug life decreases as the high-capacity ink pack adapter is removed and inserted. Follow these steps to check the life of the plug periodically.

- 1 Start MSM and open the remote panel.
☞ "Displaying remote panel" P.27

- 2 Click the [Plug Lifetime] tab.

- The plug life is indicated the number of green stars. For a new plug, five stars appear.
- The number of stars decreases one by one (one star = 20%) as the plug is nearing the end of life.
- The yellow star indicates that the plug has reached nearing the end of life. Please prepare the replacement plug.
- When the red star appears, you have to replace with a new plug.

Note

Replacement plugs are supplied with high-capacity ink pack adapter.

2. Replacing with a new plug

When the plug has reached the end of life, the error LED on the control panel turns on and the message appears in the Status Information on MSM.

Follow these steps to replace with a new plug.

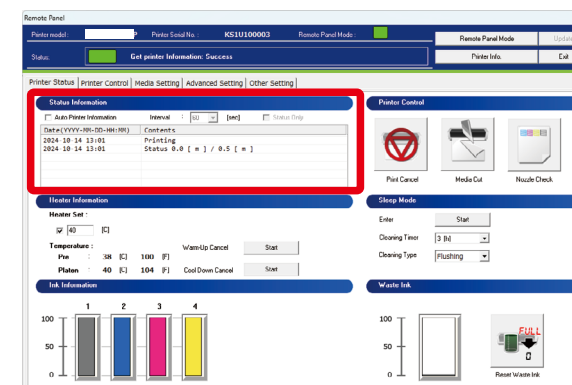

Once you replace it and reset the life counter for plug, the error LED will turn off.

1 Start MSM and open the remote panel.

👉 "Displaying remote panel" P.27

2 Check the Status Information.

- For example, when the message "Replace plug. No.2 4" is displayed, the plug of the high-capacity ink pack adapter inserted in the slots 2 and 4 must be replaced.

3 Refer to the High-capacity ink pack adapter operation manual to replace with a new plug.

👉 High-Capacity Pack Adapter Instruction Manual "3.3 Adapter Plug Replacement"

4 Reset the plug lifetime counter of the ink slot you have replaced the plug.

Replacing the cleaning wiper

When to replace:

- Approximately every 12 months

What you need:

- Replacement cleaning wiper
- Waste paper (paper that ink does not bleed through)
- Polyethylene gloves

Replacement procedure

- 1 Put the machine into the CR maintenance mode.

 "Put the machine in the CR maintenance mode" P.171

- 2 Open the front cover.

- 3 Cover the platen with the waste paper.

Important !!

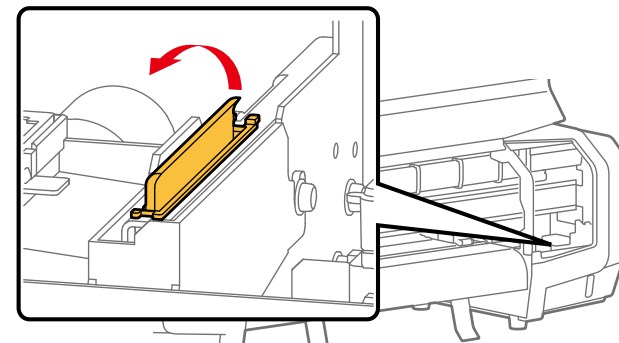

Ink may drip from the cleaning wiper. We recommend covering the floor with paper as well.

- 4 Remove the cleaning wiper.

- Lift the hook and remove the cleaning wiper.

Note

Put the used wiper in a plastic bag and dispose of it according to the local regulations.

Transport and long-term storage

Refer to this section when you transport the product or you are not using it for a long period of time.

Transporting the machine

When transporting the product, you will need to perform "Longstore" to flush ink out of the machine, empty the waste ink tank and secure the print head with the shipping bracket. Failure to do so could cause ink leakage, leading to damage to the print head. When you use the machine again, you will do the machine installation and initial ink charging.

Important!

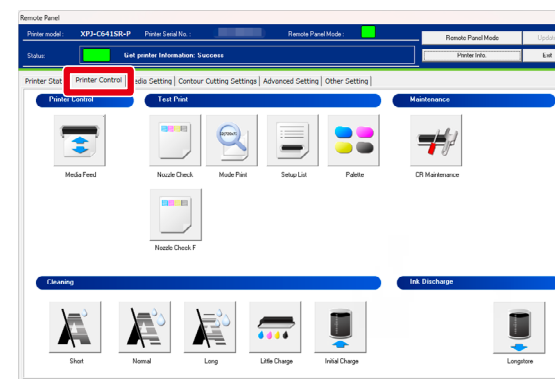

- When moving this machine, empty the waste ink tank even moving short distance. Failure to do so may result in damage to the machine.
- Do not tilt, lean or turn the machine upside down. The ink inside the machine may spill. MUTOH does not guarantee that the machine can run properly.

1. Flushing ink out of the printer and emptying the waste ink tank

- 1 Start MSM and open the remote panel.
☞ "Displaying remote panel" P.27

- 2 Click the Printer Control tab.

- The Printer Control tab page opens.

Troubleshooting

Messages and Error Messages

When it appears

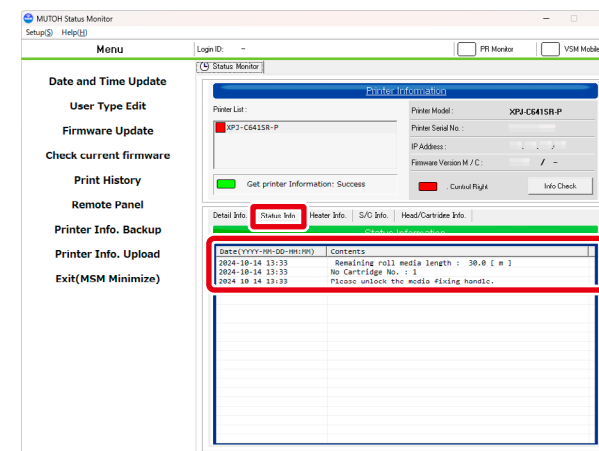

Check the message/ error/ warning

To check the messages that are displayed while printer is working normally or the error/ warning that appears when a problem occurred, you will use MSM.

1 Start MSM.
👉 "Launching/ Opening/Exiting MSM" P.26

2 Check [Status Information].

- The content of message/error/warning appears.
- If remedies for the problem are displayed, follow the instruction.

Note

- When the remote panel opens, you can check it from [Printer Status] - [Status Information].
- When an error occurs, the operation may be paused. It will resume after the cause of error is cleared.

Message appeared on the control panel

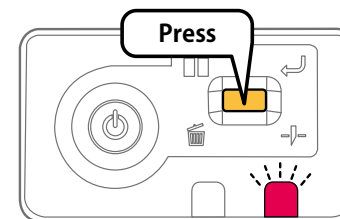

The error LED on the control panel turns on.

- 1 Check the content of message on MSM and deal with it.
 "Check the message/ error/ warning" P.208

Error message appeared on the control panel

The error LED on the control panel turns on with beep sound. (For warning, it blinks)

- 1 If it keeps beeping, short press the operation key on the control panel.
 - The buzzer stops.

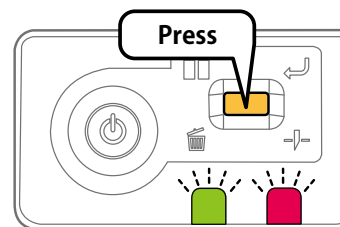

- 2 Check the content of error/warning on MSM and deal with it.
 "Check the message/ error/ warning" P.208

In the emergency mode

When a system error occurs, the data LED and error LED on the control panel blink concurrently and a beep sound continues at regular intervals.

- 1 Short press the operation key on the control panel.
 - The beep stops.

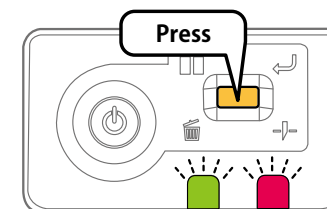

- 2** Use MSM to check the content of the system error.
 ➞ "Check the content of error in emergency mode" P.211

- If you could check the error content, move to [5].
- If you are unable to view the status monitor, move to [3].

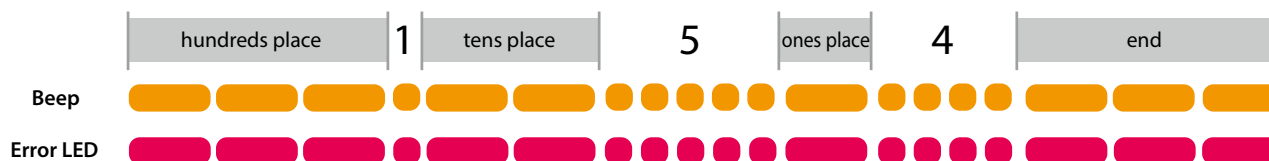

- 3** If you are unable to view the status monitor, short press the operation key on the control panel again.

- The LED flashes and the buzzer beeps in regular pattern. This pattern indicates the error code.

- 4** Count the number of times the short buzzer beeps (or short LED blinks).

- The error code is three digits.
- The long buzzer indicates the digit of the error code and the short buzzer that beeps after long buzzer indicates the error code.
- For example, when the error code 154 occurs, it beeps as follows:
- Long buzzer: 3 times, Short buzzer: 1 time, Long buzzer: 2 times, Short buzzer: 5 times, Long buzzer: 1 time, Short buzzer: 4 times, Long buzzer: 3 times

Note

- The pattern is not repeated. To check it again, short press the operation key on the control panel.
- If the error code for a digit is "0", only a long buzzer beeps, followed by a period of silence and then a long buzzer indicating the next digit beeps. The error LED also only blinks long and moves to the next long blink without a short blink.

Troubleshooting

5 Check the points below:

- Open the front cover and check if the media is jammed. If yes, remove it.
- If there are any parts that you replaced, check that it is installed correctly.

6 Turn off the machine and wait for more than 10 seconds. Then turn it on. If the same error occurs, please contact your local MUTOH dealer.

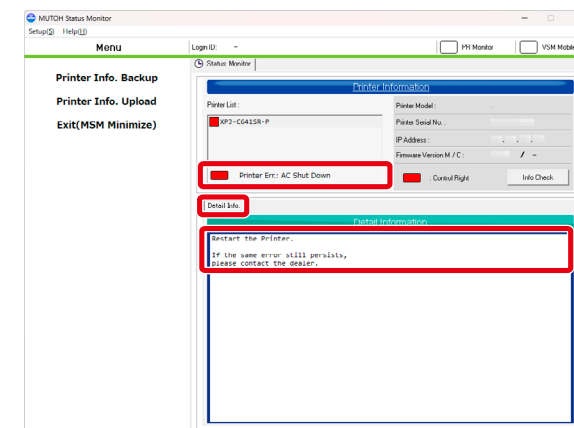

Check the content of error in emergency mode

1 Start MSM.

☞ "Launching/ Opening/Exiting MSM" P.26

2 Check [Printer Information] and [Detail Info.].

- The content of system error and remedy are displayed.

Smartchip Recovery

When the following message is prompted on MSM, a smartchip error such as broken chip may have occurred in the smartchip card. Check that the correct smartchip card is inserted and perform smartchip recovery. This will allow you to continue to print.

To perform smartchip recovery, do one of the followings according to the message appeared.

Display	Description
S/C Recog. E No.: ****	<p>The smartchip card that needs smartchip recovery may have been installed. Remove the smartchip card and insert it again.</p> <p>If the printer is still unable to read it, insert a new smartchip card.</p> <ul style="list-style-type: none"> • If a message [[**] Check Color OK ->Enter] appears after the smartchip card is reinserted, follow the message [[**] Check Color OK ->Enter] to operate.
Check Color No. : ****	<p>The smartchip card that needs smartchip recovery may have been installed. Check that the ink color of the smartchip card inserted is correct.</p> <ul style="list-style-type: none"> • In case of wrong color insertion, insert a correct smartchip card. • If color is correct, press [Enter] key. The printer will perform smartchip recovery and will continue to print.

Note

During smartchip recovery execution, the ink cartridge number being recovered is highlighted in yellow in the S/C information on MSM.

Troubleshooting

This section describes machine troubles that an error message is not prompted, and possible cause and solutions.

Note

- The printer status and error information can be checked from Status Information on MSM.
If your printer is not operating correctly, check this Status Information first.
- Make sure to use the latest version of MSM.
To check the latest available version, go to Help > Version > Check for updates on MSM.
If old version is installed in your computer, download the latest version from MUTOH Club.
 **Startup Guide "Downloading software".**

Messages and Error Messages

Troubleshooting

The media is jammed

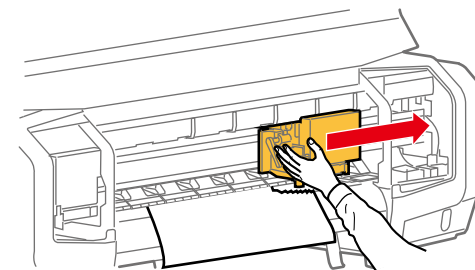

1 Press the power button on this machine.

- The blue lamp on the panel turns off.
- The machine begins powering off.

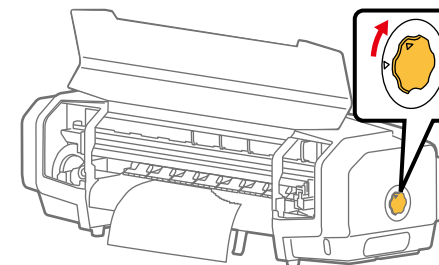

2 Open the front cover.

3 Move the carriage on the media to the right side.

4 Turn the media fixing handle to unlock it.

Messages and Error Messages

Troubleshooting

- 5 Pull out the media and cut the torn area with a cutter.

- 6 Hold both ends of the scroller and rewind the media onto the roll.

- 7 If paper dust or pieces of paper remain inside the machine, remove them.

Specifications of this product

Name		Description
Model name		XPJ-C641SR-P
Printing method		On demand piezo method
Driving method		Firmware servo/ DC motor drive
Media feed method		Straight media feed, Roll media: load from the rear of the machine and eject from the front side. Face-out winding media only
Media hold-down system		Pinch roller down system by media fixing handle
Media size	Roll outer diameter	150 mm
	Weight	up to 9 kg
	Width* ¹	<ul style="list-style-type: none">• 198 to 228 mm• 283 to 313 mm• 344 to 374 mm• 394 to 424 mm• 444 to 474 mm• 494 to 524 mm• 602 to 630*²mm
		^{*1} Common to both cut sheet and roll paper. ^{*2} Maximum width (For a roll media, width of paper core or media whichever is greater).
Maximum thickness		Head height "Low": up to 0.4 mm (Maximum thickness that media can pass through the media path: 0.8 mm)
Maximum printable width		600 mm
Media cutting method		Auto cutting or manual cutting
Heater		Built in the back side of media guide, Off / 30°C to 45°C
Head height adjustment		Two options: Low and High
CPU		64-bit RISC CPU
Memory		256MB

Name		Description
Interface		Ethernet (10BASE-T / 100BASE-TX)
Ink	Color	4 colors (Black, Cyan, Magenta, Yellow)
	Type	220 ml cartridge/ 1000 ml ink bag (Black, Cyan, Magenta, Yellow)
Waste ink tank		1400 ml tank is attached to the printer. Empty the tank when needed.
Environmental conditions	Printer Operation Environment	Temperature: 20 to 32°C Humidity: 40 to 60% (no condensation)
	Printing accuracy guaranteed range	Temperature: 22 to 30°C Humidity: 40 to 60% (no condensation)
	Change rate	Temperature: within 2°C per hour Humidity: Less than 5% per hour (no condensation)
	Storage condition	<ul style="list-style-type: none"> Without ink filled: within 6 months Temperature: -20°C to 60°C , Humidity: 20% to 80% No condensation With ink filled: within 1 week* *32 °C or above, within 4 days Temperature: -10°C to 40°C , Humidity: 20% to 80% (no condensation)
Power supply specifications	Voltage	AC 100 V to 120 V \pm 10% or 200 V to 240 V \pm 10%.
	Frequency	50 Hz / 60 Hz \pm 1 Hz
	Current	6.5 A or more
	Voltage switch	Manually switch between 115 V/230 V by switch (Factory default is set to 230 V)
Power consumption	Power off	100 V AC to 120 V AC, 1 W or below 200 V AC to 240 V AC, 1.1 W or below
	Operation	215 W (Peak 800 W or less)
Current Consumption	100 V to 120 V	6.5 A or below
	200 V to 240 V	3.5 A or below
Dimensions	Height	366 mm (With stand installed: 1,166 mm)
	Width	1,190 mm
	Depth	438 mm (With stand installed: 590 mm)
Mass	Main unit	34 kg
	Stand	8.7 kg

2024.10	00	XPJC641SRPE-A-00	V 1.00

Czyszczenie, Konserwacja, Wymiana części eksploatacyjnych. Wymagania ogólne.

Niezależnie od informacji i zaleceń zawartych w powyższej instrukcji należy czyścić dane części (jeśli urządzenie je posiada) nie rzadziej, niż w podanej poniżej częstotliwości.

Ponadto należy codziennie przeprowadzać kontrolę zabrudzenia poszczególnych części i przeprowadzać ich czyszczenie jeśli ulegną zabrudzeniu.

Czyszczenie należy wykonywać specjalnymi płynami.

Niezależnie od zaleceń powyższej instrukcji dotyczących częstotliwości czyszczenia lub wymiany poszczególnych elementów urządzenia, należy pamiętać, że druk na różnych podłożach oraz w różnych warunkach pracy może powodować potrzebę częstszego przeprowadzania czyszczenia, konserwacji lub wymiany części eksploatacyjnych. Należy zwracać szczególną uwagę na ogólny stan panujący w pomieszczeniu (temperatura i wilgotność) oraz jakość materiałów używanych w pracy z urządzeniem.

Nazwa części*	Częstotliwość czyszczenia	Uwagi
Głowica	Codziennie, po każdym dniu pracy	bez dotykania lustra głowicy podczas czyszczenia, specjalnym narzędziem
Wycieraczka	Codziennie, po każdym dniu pracy	specjalnym narzędziem
Uszczelka gumowa i kołnierz (ramka) wokół głowicy	Codziennie, po każdym dniu pracy	specjalnym narzędziem
Materiał, wkład absorpcyjny (gąbka, ciasteczko) - w stacji serwisowej (spluwacze, płucze)	Codziennie, po każdym dniu pracy	
Opróżnić zbiornik na zużyty atrament	Raz w tygodniu	lub częściej - opróżnić gdy jest pełny
Nóż odcinający (odcinacz)-	Raz w tygodniu	sprawdzić stan techniczny
Rolki dociskowe	Raz w tygodniu	czyszczenie środkiem bez silikonu
Rurki odprowadzające atrament	Raz w tygodniu	wizualnie i manualnie czy nie są zatkane
Urządzenie wewnątrz wraz z obudową	Raz w tygodniu	
Encoder	Raz w miesiącu	TYLKO ALKOHOL IZOPROPYLOWY LUB IPA, NA WYŁĄCZONYM PLOTERZE.
Czujniki optyczne	Raz w miesiącu	NA SUCHO LUB ZA POMOCĄ IPA. NA WYŁĄCZONYM PLOTERZE.
Lampa UV	Raz w miesiącu	specjalnym narzędziem
Pas transmisyjny	Raz w miesiącu	specjalnym płynem

Niektóre części wymagają okresowej wymiany.

Niezależnie od informacji i zaleceń zawartych w powyższej instrukcji należy wymieniać części eksploatacyjne (jeśli urządzenie je posiada) nie rzadziej niż w podanej poniżej częstotliwości.

Uwaga. Wymianę niektórych części winien przeprowadzić autoryzowany serwis (sprawdź kartę gwarancyjną lub instrukcję obsługi).

Nazwa części*	Częstotliwość wymiany	Wymienia
Materiał, wkład absorpcyjny (gąbka) ciasteczko w stacji serwisowej (spluwacze)	Co miesiąc	Użytkownik
Wycieraczka	Co 3 miesiące	Użytkownik lub Autoryzowany serwis gdy wycieraczka jest niewymienna.
Filtry (dampery)	Co 6 miesięcy - wcześniej w razie potrzeby	Autoryzowany serwis
Stacja serwisowa	Co 6 miesięcy – wcześniej w razie potrzeby	Autoryzowany serwis
Nóż odcinający (odcinacz)	Co 1 rok lub po stępieniu	Użytkownik
Pompy	Co 1 rok lub po zużyciu	Autoryzowany serwis
Lampa UV	Co 1 do 2 lat lub po zakończeniu czasu pracy	Autoryzowany serwis
Głowica	Co 1 do 2 lat lub po zakończeniu czasu pracy	Autoryzowany serwis

Każde urządzenie winno wykonywać nie mniej niż 10m² wydruków dziennie. Jeśli urządzenie nie jest komercyjnie używane, należy zalać głowicę, stację serwisową, rurki oraz filtry płynem czyszczącym.

Przeglądy urządzenia należy wykonywać w autoryzowanym serwisie nie rzadziej niż co 6 miesięcy.

**wyłącznie w przypadku, gdy występuje w urządzeniu*

Uwaga:

Przy wysokich prędkościach druku lub przy niektórych plikach może występować paskowanie.
